

Vikko® PRODUCT CATALOGUE

Founded Since 1983, Vikko Stationery Co Ltd. specializes in design and manufacturing of all kinds of note books. We have two unique inventions just hit the market in 2023 namely Silicone Ring Notebooks and Magnetic Softring Binder, both of which are patented in China, Europe and North America. We can also supply other various kinds of traditional notebooks at competitive price. We also design and manufacture various pencil cases as an extended product lines to match our notebook design. We are happy to fulfill your OEM and ODM needs.

An Industry-innovative Loose-Leaf Binder

This is an innovative clip folder that uses new silicone, allowing the folder to lay flat on the desk and providing greater convenience. Compared to traditional folders that can only be written on the left side, this product maximizes paper utilization and saves paper. At the same time, the silicone structure eliminates the sound of opening and closing, effectively ensuring safe use and providing users with all-round protection.

Ultimate Convenience

Unlike existing products on the market, this product uses silicone material that allows the folder to be completely flattened, providing a more comprehensive display of documents, and it can also be used as a sketchbook. The softness of the rubberband allows for easy one-handed opening and page turning. Additionally, the rubberband is compatible with most products on the market, reducing waste and enabling a one-stop use solution. In addition, the product has achieved multi-dimensional innovation in structure, and a pen can be stored on the side, providing comprehensive convenience.

User-Friendly Design

The back of the product has been designed with rounded edges, so there are no sharp corners on the entire folder. It eliminates the dullness and makes the product crush-resistant and easy to carry. Compared to traditional ABS folders that are prone to breakage in low temperatures, this product is made of silicone material that is highly resistant to low temperatures, allowing for normal use even in winter. Traditional plastic parts often obstruct hand movement when writing on the left side of the notebook, but silicone rings provide a soothing touch when contacted with hands.

A User-Friendly Rubber Ring Notebook

This is an industry-innovative rubber ring loose-leaf notebook that uses new rubber that is not easily damaged and has excellent durability, ensuring a long-term use. The unique structure makes it easy to carry, occupying minimal space and not getting caught on oags. In addition, a pen can be stored on the side, and the notebook can be folded up and down and left and right during use, solving many difficulties of traditional loose-leaf notebooks.

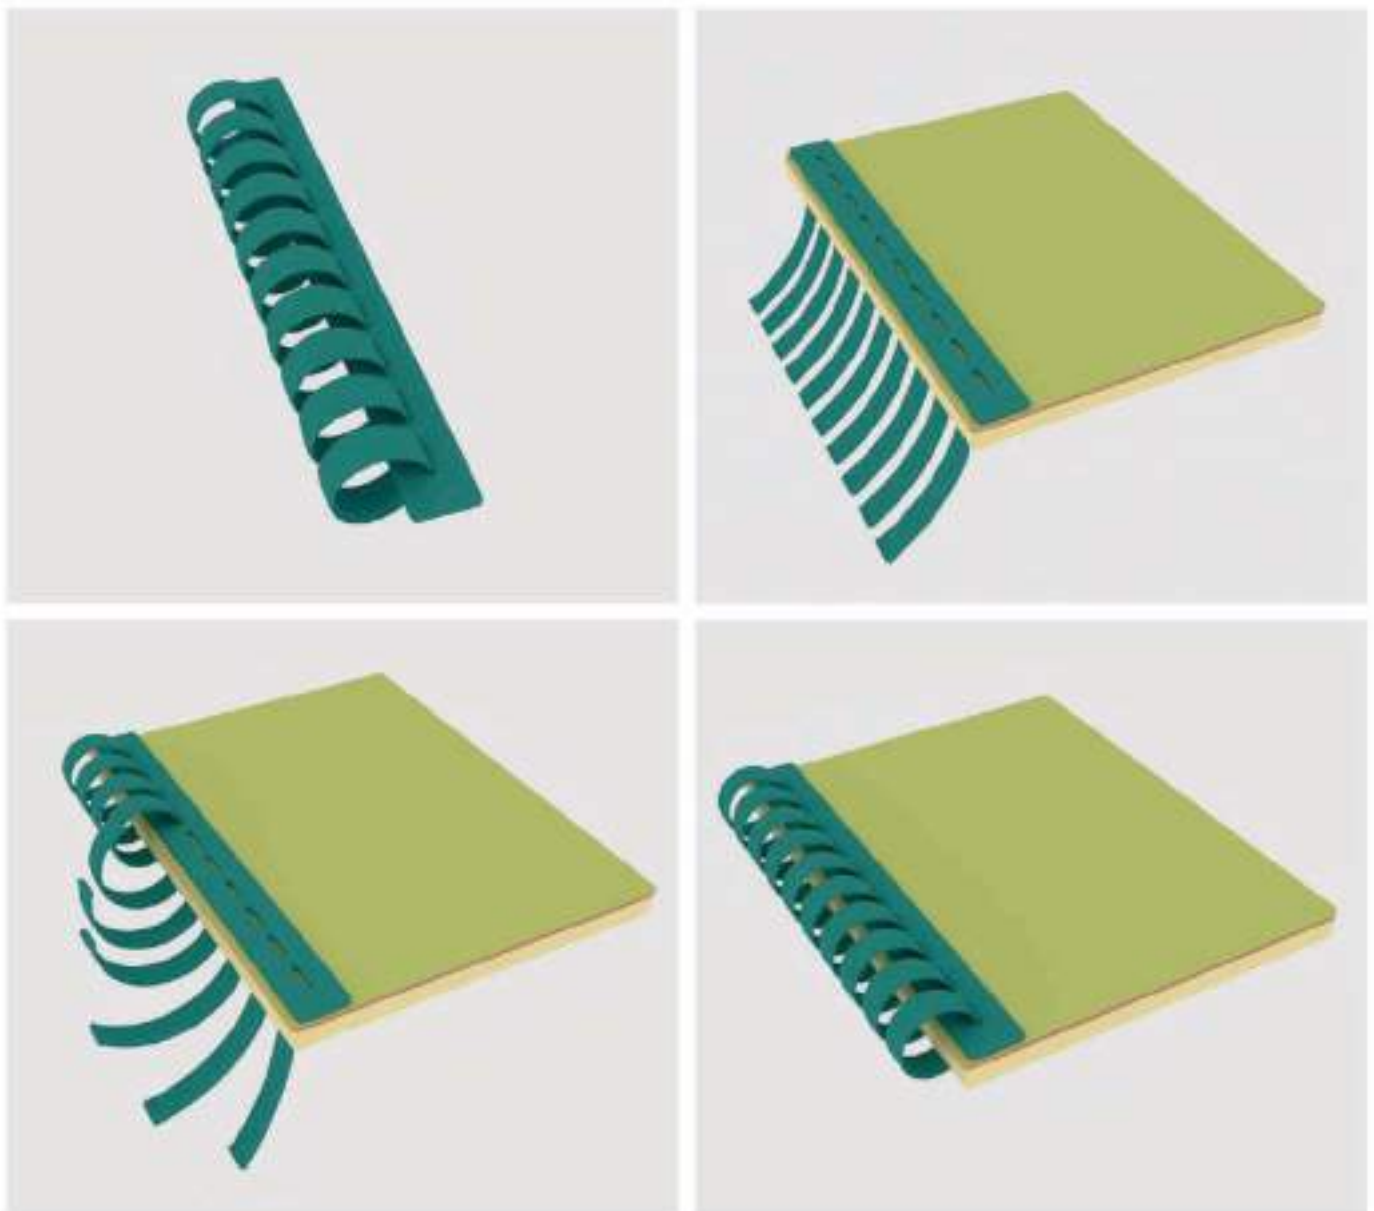

High-quality Raw Materials

The design team strictly selects high-quality raw materials and uses silicone material that is equivalent to baby pacifiers. It is safe, environmentally friendly, and soft, providing a comfortable and stress-relieving feeling when writing. The cover of the product uses high-quality PP material that is heat-molded to avoid scratches while in use making it safe and more durable and resistant to wear and dirt.

User-Friendly Design

The unique structure makes it easier for users to write, with a soft and smooth touch while also solving the problem of iron wire coil notebooks being hard to write on. Additionally, the product uses a 360-degree folding mode, allowing users to adjust it freely, saving space compared to loose-leaf binders and providing an appropriate grid width for students to write on, providing a foundation for exam practice. When writing on the left-hand page, traditional plastic parts can obstruct hand movement, while the silicone ring provides a soothing feel when in contact with the hand. This solves the safety issue of the sharp and dangerous tip of the iron coil, while also preventing discomfort caused by touching it.

Unique Appearance Design

The coil colors of the loose-leaf notebook are diverse, with bright and vibrant color combinations providing a unique aesthetic visual experience. While ensuring high-quality usage, the overall design is eye-catching and free of any redundant design, reflecting the perfect fusion of fashion trends and minimalistic art.

Eco-Friendly Product

This product mainly uses silicone and PP, and adopts green environmental protection technology to the greatest extent, reducing environmental pressure to the lowest. Through certification, all raw materials meet ROHS environmental protection requirements, can fully realize recyclability, reduce environmental pollution, and fully implement low-carbon environmental protection strategy.
